- ✦ Green items to be programmed/configured by a consultant. Blue items are the deployment-specific data.

- ✦ The custom plugin should be routable not only from all posts, but also from rewritten URLs, like "/sql/*", as well as from specific GET requests' URIs.

- ✦ The monolithic executable should be relocatable, with the build accepting relative configuration paths. All configuration settings (including pool pre-creation) should have defaults at compile time. Alternative configuration file may be specified at the command line.

- ✦ The monolithic executable should be working and run on Linux 32/64 and Apple Leopard (Intel)

- ✦ The project to be released under an open-source license and maintained for a year on an external hosting, like Google code.

- ✦ 3-5 days on-site initially and on deployment, 1 day bi-weekly in the interim.
